

With rising energy prices on one side and falling feed-in-tariffs on the other, owners of residential solar rooftops are well-advised to maximise self-consumption of the generated PV power. By extending the PV and energy storage system to include charging of electric vehicles (EVs), a high degree of energy independence can be secured. Connecting the EV charger with any GoodWe inverter via the SEMS communication platform enables Solar Charging. All GoodWe storage inverters with batteries provide additional Hybrid Charging options.
